

Vivek Upasani

Software Engineer — Frontend • Backend • Full Stack

[GitHub](#) | [LinkedIn](#) | [Portfolio](#) | [Email](#)

SUMMARY

Software engineer focused on building and shipping full stack web applications. Experienced across frontend, backend, databases, cloud infrastructure and ai integrations with hands on experience taking products from idea to deployment.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frontend: React, Next.js, React Native, Tailwind CSS

Backend: Node.js, Express.js, Drizzle ORM, BullMQ

Databases: PostgreSQL, MySQL, MongoDB, Redis, Firebase, Supabase

Infrastructure: Docker, Git, Github, Vercel, Render, Railway

EXPERIENCE

Independent Software Developer

Jan 2026 - Present

Software Developer - Freelancer

Remote

- Designed and developed production full stack web applications, covering frontend architecture, backend services, database design, authentication, and deployment.
- Built responsive, production ready interfaces from product requirements and designs using React, Next.js, TypeScript and Tailwind CSS.
- Designed REST APIs and backend services using Node.js and Express, integrating databases, third party services, authentication and payment infrastructure.
- Containerized applications with Docker and deployed production workloads across cloud platforms including Vercel, Render and Railway.

Boulevard Legacy LLC

July 2025 - Nov 2025

Full stack developer - Freelance

Remote

- Developed an AI powered content analysis platform for evaluating pre publish content and generating automated optimization feedback.
- Built AI workflows for content analysis, recommendation generation and automated processing of user submitted content.
- Designed and developed an AI driven media kit generation system that transformed audience insights and performance metrics into brand ready PDFs and shareable portfolio pages.
- Built and launched a high converting marketing landing page focused on performance, responsive design, clear product messaging and lead generation.
- Worked across the full application stack from frontend interfaces and API integration to backend workflows and production deployment.

Keryar

Feb 2025 – Jun 2025

Full stack developer - Intern

Remote

- Developed features for a teacher performance evaluation platform used to collect, manage and review institutional evaluation data.
- Designed and implemented frontend workflows for submitting, updating, and managing teacher information.
- Built administrative interfaces for reviewing submissions, assigning identifiers and managing evaluation records.
- Developed backend functionality and data services using Node.js and MySQL to support application workflows and institutional data management.
- Worked across the application stack using Angular, Node.js and MySQL, contributing to both frontend development and backend implementation.

SELECTED PROJECTS

Cluezy - AI Research Engine

Live

TypeScript, Next.js, Tailwind, Supabase, Docker, Redis, Upstash, Vercel AISdk, Composio, Stripe

- Architected and built an agentic AI research engine combining web search, document analysis, and external data sources into a unified research workflow.
- Integrated multiple search and data providers including Tavily, Exa, Firecrawl and thirdparty APIs for multisource research and retrieval.
- Developed document processing workflows supporting PDF analysis, YouTube summarization, academic search, Reddit search and application connectors.
- Built subscription and usage management infrastructure with Stripe, Redis, and Supabase to support free and paid users with usage based limits.
- Integrated AI powered workflows using the Vercel AI SDK and Composio for model orchestration and external application interactions.

Deploymate - Vercel Like Deployment Platform

GitHub | Demo

TypeScript, React, Tailwind CSS, Node.js, Express, Docker, BullMQ, Redis, Supabase

- Built a self hosted deployment platform automating repository cloning, source storage, application builds, and static site deployment.
- Designed asynchronous build infrastructure using BullMQ and Redis for background deployment processing and scalable job execution.
- Containerized isolated build environments with Docker and implemented live deployment progress tracking across the build pipeline.
- Built backend services for repository processing, artifact management, build orchestration and deployment lifecycle management.
- Designed dynamic host routing for serving deployed applications through generated deployment URLs with isolated application environments.

Whispy - AI Voice Dictation

GitHub | Demo

TypeScript, React, Electron, Tailwind, Groq, OpenAI

- Built a cross platform desktop voice dictation application using Electron, React, TypeScript
- Integrated Groq Whisper for low latency speech to text transcription with optional AI powered text refinement and cleanup.
- Implemented global push to talk interactions, system wide keyboard shortcuts, and automatic text insertion into active applications.
- Designed the application around low latency local interactions and background processing for a seamless real time dictation workflow.

EDUCATION

Shri DN Institute of computer application

Gujarat, India

B.S.C in Computer application & Information technology

CGPA: 7.95
